

6 STEPS TO CLEARING SCABIES

WITH LYCLEAR®

1.

If you or your children have sore or itchy skin, go to your health service, you may need scabies medication.

2.

Everyone in the house needs to be treated—including visitors—at the same time.

3.

HOW TO USE SCABIES CREAM

- Put it on after a shower and leave it on all night
- Cover the whole body
- For babies, children and adults apply over the scalp
- Do not put on mouth or eyes
- Remember to put more cream onto your hands if you wash them.

4.

GET RID OF THE SCABIES IN THE HOUSE

- Wash sheets, clothes and towels in hot water
- Hang washing in sun all day
- Put mattresses and pillows in the sun, keep them off the ground and flip them over after a few hours.

5.

WASH OFF THE CREAM

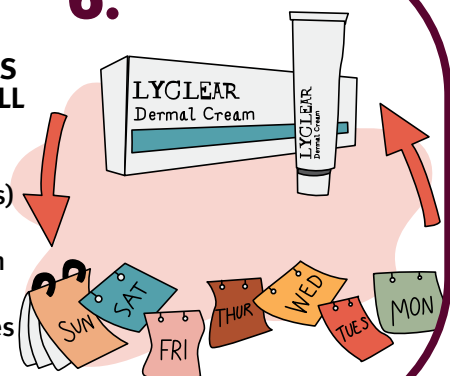

- The cream needs to be on the skin for 8 hours to kill the scabies mite
- The skin may stay itchy for the next week. Please speak with clinic staff if your skin doesn't feel better after a week.

6.

REPEAT THESE STEPS AFTER 1 WEEK TO KILL ANY SCABIES EGGS

- Treat everyone (including visitors) in the house
- Do the washing in hot water
- Put the mattresses and pillows in the sun for 8 hours.
